

At Linn-Mar Community School District we use digital learning to personalize learning, provide online classes, meet Common Core State Standards, administer online assessments, make data-driven decisions, communicate with parents, teachers and community, etc.). An example of digital learning our new online Literacy program. We would like to extend this to additional training for our High School students. However, Linn-Mar's network is not adequate for all students to have access to all resources due to bandwidth restrictions and fails to keep up with demand. In order to establish an adequate BYOD program we require enterprise wireless and double our current bandwidth. The need for a reliable high-speed network is only going to increase in the near future.
